

INVARSOFT PRIVATE LIMITED

TEAM ROLES & OPERATING CHARTER • PRODUCT: FACILITYOS

Executive Overview: Invarsoft Private Limited operates through a structured, cross-functional team division for the development and management of FacilityOS. The team balances engineering precision, product strategy, and operational administration across five core functional roles.

1. Trigun — Technical Lead, Frontend Developer & Quality Assurance Manager

Engineering & Quality Assurance

- **Project Planning & Execution:** Directs overall technical strategy, sprint planning, feature roadmaps, and execution schedules.
- **Frontend Application Development:** Leads the construction of user interface architecture, client-side application flows, and core user screens.
- **Quality Assurance & Testing:** Performs comprehensive end-to-end system testing, feature validation, cross-device verification, and issue tracking prior to release deployment.

2. Ranadeep — Frontend Developer

Core Engineering (User Interface)

- **UI Component Development:** Builds responsive user-facing screens and reusable interactive client components.
- **Role-Based Portal Interface:** Develops specialized portal interfaces tailored for Student, Technician, Warden, and Admin consoles.
- **API Consumption & Visual Fidelity:** Integrates backend network endpoints into dynamic client states while maintaining layout fidelity across mobile and desktop viewports.

3. Rithvik — Backend & Database Developer

Core Engineering (Server Architecture)

- **Server & API Architecture:** Designs and implements high-performance server-side data endpoints, business logic handlers, and request pipelines.
- **Database & Data Management:** Formulates database relational schemas, data persistence models, and data integrity validation rules.
- **Security Services:** Implements token authentication protocols, role-based access control (RBAC), and OTP generation services.

4. Aditya — Product Manager & Mobile Publishing Lead

Product Strategy & Mobile Publishing

- **Market Research & Benchmarking:** Conducts competitive market research and feature benchmarking against existing enterprise platforms to identify product improvements.
- **Feature Optimization:** Formulates feature specifications and recommendations to enhance overall application value, usability, and workflow efficiency.
- **Mobile Store Publishing:** Manages submission requirements, developer compliance, and publishing pipelines for mobile application distribution.

5. Bharat — Operations & Communications Lead

Non-Technical Operations & Documentation

- **Documentation & Filing:** Authors and maintains all official non-technical documentation, business proposals, startup registration forms, and compliance files.
- **Internal Team Coordination:** Facilitates internal communication channels, meeting documentation, and task progress tracking.
- **External Relations:** Manages administrative correspondence with incubator coordinators, mentors, and external stakeholders.

SUMMARY RESPONSIBILITY MATRIX

Member Name	Official Role	Domain	Core Responsibilities Focus
Trigun	Technical Lead & QA Manager	Engineering & QA	Project Planning, Execution, System Testing & Frontend Architecture
Ranadeep	Frontend Developer	User Interface	User Interface Development, Visual Styling & Client Interaction Logic
Rithvik	Backend Developer	Server & DB	Server API Services, Database Schema Design & Security Authentication
Aditya	Product Manager & Publishing Lead	Product Strategy	Market Research, Feature Optimization & Mobile Store Submissions
Bharat	Operations & Communications Lead	Operations & Admin	Documentation, Pitch Materials, Compliance & Team Operations
